3 PLAN  
PROPOSED

From the supplier's installation guide:

'We stipulate that the soakaway is to be situated more than 10m away from a watercourse and 50m away from a spring or borehole. This complies with Environment Agency rules in England & Wales.

The solid waste should compost within the chamber for a minimum of 1 year and when emptied it should ideally be further composted in a designated compost area for several years. We advise against using the compost on allotments or food growing areas, near play areas or anywhere that poses the risk of accidental ingestion. The compost need not have further composting after removal if buried, for instance for tree planting.'
